## Preface to the Second Edition

---

Gynaecology as a discipline is becoming increasingly fragmented with the domination by the sub-specialist groups. It has therefore become more difficult for students to achieve an overview of the various aspects of human reproduction and diseases of the female pelvic organs. This fact coupled with the advent of newer knowledge and technology, has under lined the necessity for revising this undergraduate text. We have inducted three section editors from United Kingdom, Drs BS Sengupta, Janine Elson, PS Sengupta, who most willingly revised and updated the various chapters making a conscious effort to blend the standard of teaching in the United Kingdom with that in the subcontinent. All the chapters have been either re-written or re-edited, extensively complemented by illustrations, diagnostic algorithms and tables, to bring the contents into line with currently accepted methods of clinical practice. The editors have tried to keep a balance with emphasis on common disorders without making the book voluminous and without compromising the format of clean, concise and easy to understand language structuring around five broad heads (Five Fingers). The information in all the chapters has been thoroughly updated. We sincerely hope that this edition of gynaecology will help the students and the trainees to understand the core knowledge of the discipline and guide them in examinations and future practice.
