Acknowledgement

“I would maintain that thanks are the highest form of thought, and gratitude is happiness doubled by wonder “

- Gilbert K. Chesterton

First, we praise and thank **“Almighty God”** for showering his blessing on us by giving us the strength and wisdom for the successful completion of the study.

We thank **“Dr. G.Vijayalakshmi”** principal of Sri Devaraj Urs College of Nursing, Tamaka, Kolar, for giving learning atmosphere and constant support to conduct the study.

We express our gratitude to **Dr. Lavanya Subhashini**, Vice principal of Sri Devaraj Urs College of Nursing, Tamaka, Kolar, for guidance and support throughout our research work.

We thank to **“Dr. Zeanath Cariena J”** HOD of Medical Surgical Nursing, Sri Devaraj Urs College of Nursing and CNO at RLJH & RC Tamaka, Kolar for her encouragement, timely suggestion and support the study.

We express our sincere gratitude to all the **“HOD’s”** of various departments and all **Teaching faculty** of Sri Devaraj Urs College of Nursing for their encouragement, suggestions expert guidance in tool validation, which helped us to complete the study.

We express our heart full thanks to **“Prof. Mary Minerva”** HOD of community health nursing Dept., Sri Devaraj Urs College of Nursing.

Our heartfelt thanks and gratitude to our research guide **“Mrs. Vani. R”** HOD of Nursing foundation, Sri Devaraj Urs College of Nursing who deserve respect and gratitude for her constant guidance, constructive suggestion and encouragement to undertake and complete the research work successfully.

Our special thanks to **“Mr. Ravi Shankar”**, Statistician, Dept. of Community Medicine of Sri Devaraj Urs Medical College for his guidance and valuable suggestions in statistical analysis of data.

We express our gratitude to all the **MSc. Faculty** Sri Devaraj Urs College of Nursing for guidance and support throughout our research work.

We extend our special thanks to **Librarians** of Sri Devaraj Urs College of Nursing for helping in procuring relevant materials and books when required.

We express our gratitude to our **Office staffs** of Sri Devaraj Urs College of Nursing for helped us to complete the study

We acknowledge and dedicated this project work to our loving **Parents** and a word of special thanks to our **Classmates** for their encouragement, timely help and cooperation throughout the study.

We express our sincere gratitude to our **Friends and well-wishers** for their timely help and most of all for their prayers.

Thank you very much from all of us!

ABSTRACT

TITLE: “A study to assess the perception regarding healthy living strategies among elderly in a selected hospital, Kolar with a view to conduct group health education.”

BACKGROUND: The strategies are intended to help people live longer, more independent, and self-sufficient lives. The current study sought to analyse and compare perceptions of Strategies for healthy life among the elderly.

METHODS: The study was a descriptive survey that used a structured self-administered questionnaire to assess people's perceptions on healthy living practises. 100 senior people from a selected hospital in Kolar were recruited for the pilot and main studies, with data collected using a tablet computer sampling strategy of convenience.

Results: The study's aims were to examine perception of geriatric clients regarding healthy living strategies and certain demographic characteristics. Conclusions are offered under the following headings based on the study's aims.

1. According to the first goal of the study, perception of healthy living strategies among the elderly in a selected hospital Kolar was assessed and categorised as: good perception (72%), moderate perception (26%), and bad perception (2%).
2. According to the second objective of the study, finding the suggestion between perception and designated demographic variables was done, and the results revealed that there is a statistically significant association between marital status ($\chi^2=8.5996$, $df=3$, $p=0.02603$) and health checkup done in the past ($\chi^2=9.2597$, $df=3$, $p=0.02603$) and no association between Age ($\chi^2=7.6142$, $df=3$, $p=0.054697$), Gender ($\chi^2=0.3704$, $df=1$, $p=0.542784$), Qualification ($\chi^2=6.188$, $df=5$, $p=0.2883532$) Type of the family ($\chi^2=1.2688$, $df=3$, $p=0.736552$), History of Co-Morbid Condition ($\chi^2=0.4841$, $df=1$, $p=0.486557$) Physical Activity ($\chi^2=0.0901$, $df=1$, $p=0.763994$), Personal Habits ($\chi^2=0.662$, $df=1$, $p=0.415853$), Source of information ($\chi^2=7.401$, $df=3$, $p=0.0601575$) thus the assumption is rejected, whereas only with regard to marital status ($\chi^2=8.5996$, $df=3$, $p=0.02603$) and a previous health check up ($\chi^2=9.2597$, $df=3$, $p=0.02603$) is **statistically significant** because the calculated value was greater than the table value.

CHAPTER-I

INTRODUCTION

“Research is creating new knowledge”

-Neil Armstrong.

“A little progress each day adds up to big results”

-SATYA NANI.

Old age is a phase of life cycle characterized by its own developmental issues, many of which are concerned with loss of physical ability, mental acuity, friends, loved ones, status, and power. In the meantime, old age is associated with the accumulation of wisdom and opportunity to pass that on to future generations. One of the tasks that informs Erik Eriksson's view of healthy old age as a time of integrity and not a time of despire.

According to the National Council on Aging (2014), 92 percent of older persons have at least one chronic disease (such as heart disease or diabetes), and 77 percent have at least two.⁽¹⁾ The ability to control these diseases and adjust to accompanying physical or psychological changes is critical for a thorough grasp of good ageing.⁽¹⁾

Rowe and Kahn characterised effective ageing as the absence of sickness, normal physical and cognitive functioning, and social participation.

Self-perception of health, psychological and social resources, coping strategies, and the ability to adjust to life's changes are crucial themes in effective ageing. As a result, the health of older persons might be seen as a dichotomy between objective and subjective perceptions.

“International Day for Elderly” (UN) is celebrated every year on **1st October**. It is observed to focus on the importance of senior citizens who are neglected in our society. It emphasizes on our responsibilities towards the elder in order to make their lives happier with dignity and respect. The theme for 2021- **“Digital equity for all ages”**⁽²⁾

Present day global statistics document that, 125 million people are aged more than 80 years. By 2050, and there will be around 120 million exclusively in China compare to 434 million people distributed across globally. It is observed that, by 2050, 80% of all older people will be in low- and middle-income countries.⁽³⁾

The Healthy Ageing Program is a work programme that helps to implement adding Years to Life and Life to Years: A Health Promotion Strategy for Older People. The Healthy Ageing Program's goals are to improve life expectancy from 60 to 80 years old, people's health from 60 to 80 years old, the lives and autonomy of older people who are already affected by sickness and impairment, and to increase the expectation of a healthy and pleasurable old age.

Healthy living strategies for the elderly generally have three basic aims:

1. Maintaining and increasing functional capacity
2. Maintaining or improving self-care and
3. Stimulating one's social network

The goal of these measures is to help people live longer, more independent, and self-sufficient lives.

The global rectangularization of the life expectancy curve, combined with a significant growth in the proportion of the population reaching old age, compels society to get a better grasp of how to ensure health and quality of life in old age.

NEED FOR STUDY

“Learning is not the product of teaching. Learning is the product of the activity of learners”

-John Holt.

Healthy Aging is the process of improving possibilities for physical, social, and mental health in order to enable older individuals to participate fully in society and enjoy an independent and high quality of life. It is about learning, sharing best practises, and developing strategies and policies to support the individual well-being and personal growth of older people.

In today's world, the youths are seen forgetting their moral duties towards elders. During old age, people need the utmost love and care. Caring for elderly is not only a responsibility but also a moral duty. As the body ages, it becomes prone to medical conditions. Ageing cannot be prevented, but we can learn how to deal with arising conditions for great health of our loved ones. So, the main motivation for choosing this course is to learn how to care for the elderly and improve their quality of life.

The Healthy Ageing Program is a work programme that helps to implement Adding Years to Life and Life to Years: A Health Promotion Strategy for Older People. The Healthy Ageing Program's goals are to improve life expectancy from 60 to 80 years old, people's health from 60 to 80 years old, the lives and autonomy of older people who are already affected by sickness and impairment, and to increase the expectation of a healthy and pleasurable old age.⁽⁵⁾

The WHO's emphasis on extending life expectancy has resulted in a significant increase in the worldwide elderly population, both in relative and absolute terms. The increasing number of elderly persons will challenge global, national and local resources in the future. The focus on active aging has made it a matter of increasing urgency to identify ways of maintaining elderly persons' health and well-being.

The elderly have long been overlooked as a target audience for health promotion programmes. The need to promote health among the elderly was first recognised in the 1990s. After 2001, when WHO experts uniformly declared the necessity of a healthy lifestyle at all stages of life, health promotion programmes aimed at the elderly began to increase in number. Exercising, quitting smoking and limiting alcohol consumption, participating in learning activities, and integrating into the community have all been shown to help prevent the development of many diseases and the loss of functional capacity, thus improving quality of life and increasing life expectancy.

Based on the gaps identified, the elderly population is likely to increase in the future with a definite shift in disease pattern, ie. from communicable to non-communicable, and it is high time that the health care system gears a definite need to emphasise the fact that disease and disability are not part of old age and that help must be sought to address the health problems. The concept of healthy ageing through healthy living techniques, which covers preventive, promotive, curative, and rehabilitative elements of health, should be promoted among the aged. As a result, the investigators were compelled to perform a research study to promote healthy living practises among the elderly.⁽⁶⁾

CHAPTER-II

OBJECTIVES

TITLE OF THE TOPIC

“A STUDY TO ASSESS THE PERCEPTION REGARDING HEALTHY LIVING STRATEGIES AMONG ELDERLY IN A SELECTED HOSPITAL, KOLAR WITH A VIEW TO CONDUCT GROUP HEALTH EDUCATION.”

OBJECTIVES

- To assess the perception regarding healthy living strategies among elderly by using perception questionnaire.
- To find out the association between perception scores regarding healthy living strategies with selected demographic variables.

RESEARCH HYPOTHESIS

The following hypotheses will be tested at 0.05 level of significance.

H₁: There will be a significant association between perception scores regarding healthy living strategies and selected demographic variables.

Assumption:

Elderly perception score regarding healthy living strategies may increase, which lead to successful aging.

Delimitation:

The study was limited to:

- The study is limited to senior citizens aged above 60 years.
- Perception questionnaire restricts the response of subjects.

Operational definitions:

Perception

Perception in this study refers to the elderly's views and attitudes toward healthy living practises, which will be examined using a perception questionnaire.

Healthy living strategies: enabling oneself to take control over their health and its determinants, and their health which is assessed by Lifestyle and behaviour modifications.⁽³²⁾

In this study **Healthy living strategies** refers to the improvements in multidimensional perspective with physical, psychological, social and spiritual wellbeing among elderly which will best assessed through perception scores.

Elderly: It refers to ages nearly/ surpassing the life expecting of human beings.

In this study it refers to elderly group falls between the age group 60-80 years for health services at RLJH & RC.

Group health education: In this study, health education regarding healthy living techniques was provided to senior people aged 60 to 80 at RLJH and RC.

CHAPTER-III

REVIEW OF LITERATURE

“Our review of the literature says this appears to be bigger than in the past”.

-Bob Dietz.

The Review of literature are classified under two headings

Studies related to perception on Health living strategies among elderly

A qualitative study to investigate older individuals' opinions on healthy living and their interactions with health providers. In the Netherlands, 18 semi-structured interviews were conducted with elderly persons (aged 55-98). The transcripts were analysed using the framework analysis method. The data revealed three themes: (a) healthy living: daily routines and remaining active, (b) enacting healthy living: embracing and adapting, and (c) healthy living contact with health professionals: autonomy and reciprocity. According to the report, older folks like to live active and independent lives and enjoy healthy living holistically. When speaking about healthy living, health practitioners should focus on developing an equitable trust relationship and on positive health outcomes such as autonomy and self-sufficiency.⁽⁷⁾

A qualitative study on Understanding of health and preventive experiences for a tailored approach conducted among the Elderly in German. Four focus groups (N = 42 participants) and 12 personal interviews (women and men in two age groups: 65-75 years and 76 years) were held. Participants were drawn from a stratified random sample of 200 people from two districts of a major German metropolis using routine data from a local health insurance fund. The study centred on the participants' understanding of health and disease prevention. Focus group videos were recorded and analysed utilising mind mapping techniques. The interviews were digitally recorded, verbatim transcribed, and submitted to qualitative content analysis. There was a gender-specific approach profile found. Men preferred competitive and exercise-oriented activities more than women, and they related healthy ageing with mobility and physical activity. Women, on the other hand, had a broader notion of

healthy ageing, which encompassed not only physical activity but also a balanced diet, relaxation/wellness, memory training, and independent living; they favoured holistic and socially oriented services over performance-based ones.⁽⁸⁾

A study was carried out to analyse the health and social concerns of the elderly in a Gujarati urban region. A total of 311 elderly persons 60 years old and above were interviewed using a pre-tested schedule. Around 66% of the patients belonged to the age group of 60-69 years old. Nearly 13% of the respondents were illiterate. Around 56% of people said they were unhappy in life. Approximately 44% of respondents stated that they were not loved by family members. The study's findings revealed a need for geriatric counselling clinics that can address their physical and psychological requirements.⁽⁹⁾

A qualitative study conducted on elderly patient's perceptions of care in the emergency department. Patient's perception and satisfaction are areas of growing concern in health care research, but little has been reported from the perspective of elderly persons. The goal of this study was to describe older patients' perceptions of care using a descriptive study approach. Twelve elderly people were interviewed following a treatment episode in one of three emergency department in the western united states and data were submitted to content analysis according to qualitative interpretive methodology. The finding support some aspects of existing literature and offer additional information regarding care of elderly person in the emergency department.⁽¹⁰⁾

A qualitative study on Understanding of health and preventive experiences for a tailored approach conducted among the Elderly in German. Four focus groups (N = 42 participants) and 12 personal interviews (women and men in two age groups: 65-75 years and 76 years) were held. Participants were drawn from a stratified random sample of 200 people from two districts of a major German metropolis using routine data from a local health insurance fund. The study centred on the participants' understanding of health and disease prevention. Focus group videos were recorded and analysed utilising mind mapping techniques. The interviews were digitally recorded, verbatim transcribed, and submitted to qualitative content analysis. There was a gender-specific approach profile found. Thus, the study recommends that in order to inspire older persons to participate in preventative care, gender-specific needs must be considered.⁽¹¹⁾

A -study was conducted to examine the Impact of Quality of Life on the Health of Older People from a Multidimensional Perspective, with a sample size of 500 people drawn at random from the province of Granada's major day centres for the elderly (Spain). For the inferential analysis, the CUBRECAVI questionnaire, a multidimensional scale of health and quality of life, as well as the Katz and Garca measure questionnaires, are used to assess quality of life, with the findings from the meta-analysis and validation tests indicating that participants have a positive perception of their quality of life, taking into account health, leisure, environmental quality, functional capacity, level of satisfaction, social support, social networks, and other factors. As a result, the study indicated that multidimensional evaluation is an excellent technique for assessing the elderly's quality of life as well as their objective and subjective health.

A scoping review was carried out to determine the classification of health promotion and disease prevention strategies aimed at the elderly. The search strategy included the reviews published from January 2000 to April 2015 based on the identification of interventions reported as health promotion, primary disease prevention, screening or social support. Out of 334 systematic reviews addressed -182 of them assessed interventions belonging to health promotion, 219 to primary prevention, 34 to screening and 35 to social support. The study reveals that, More emphasis is required on area of health promotion include Health education, Behavior modification, Health communication.⁽¹³⁾

The scoping review approach is used to examine the distribution and trends in health promotion research, as well as the use and contribution of eHealth technology in geriatric health promotion. The study includes six search databases: PubMed, CINAHL, the Cochrane Library, EMBASE, Pub Psych, and ERIC (EBSCOhost), and studies published from January 2015 to October 2019, written in English, were included and analyzed. The study's findings show that the amount of literature on boosting health for the elderly has grown, and that certain sorts of interventions are still preferred in current health promotion initiatives for older persons. The most commonly used methods were found to be health promotion (n = 322), followed by screening (n = 264), primary prevention (n = 114), and finally social support (n = 72). Beyond the above interventions, Health technology is also used in health promotion activities to prevent the elderly from falling and to improve home safety. The study emphasized that more rigorous research is needed in different areas, especially in older populations, various professions, women, and people with dementia.⁽¹⁴⁾

Using explicit systematic literature review technique, a systematic literature review on Health literacy programmes for older individuals in increasing the health and well-being of older adults was undertaken. Using the Rychetnik et al. guiding questions and the Population Intervention Comparison Outcome framework, a systematic online search of current publications on programmes focusing on health literacy in the older adult population was conducted. The search found nine papers, four of which described functional ($n = 4$) and five of which described interactive ($n = 5$) health literacy programmes. Overall, the selected papers revealed favourable benefits in supporting older individuals' health literacy skills. According to the study's findings, more high-quality studies with clear and solid research methodologies are required to develop and assess evidence-based interactive health literacy programmes aimed specifically at older persons.⁽¹⁵⁾

A focus group study was used to undertake a qualitative research design on the perspectives of older adults on ageing well. Seven focus groups with a total of 56 participants were held (aged 63–81 years). Braun and Clarke's qualitative interpretative thematic technique was used to evaluate the data. The findings were broken down into three basic themes: "feeling of well-being," "having good physical health," and "maintaining good mental health." Participants thought that positive qualities such as joy, independence, having a life purpose, self-possessed satisfaction, and financial security, in addition to being socially involved and experiencing good bodily and mental health, influence ageing well. The study's findings helps to have a better understanding of older individuals' viewpoints on ageing successfully. Physical activity, participation in social and leisure activities, healthy eating habits, a sense of purpose in life, and intellectual engagement are all aspects that contribute to ageing well.⁽¹⁶⁾

CHAPTER IV

RESEARCH METHODOLOGY

“It is important to get results from experiments but the most important is the process in getting that result.”

- Dr. Nik Ahmad Nizam.

“Research can be undertaken in any kind of environment, as long as you have the interest. I believe that true education means fostering the ability to be interested in something.”

- Sumio Lijima

Research methodology is the background for directing the study. This chapter contracts through explanation of the methods, research approaches, design, area of the study, population, sample and sampling techniques, sample Size, Standards for sample selection, data collection instruments, development of tool.

RESEARCH APPROACH

Research approach is the whole design including assumption, the process of inquiry, the type of data collected and the measuring of finding.

The research approach used in the study was Quantitative survey approach.

RESEARCH DESIGN

Researchers referred to do research strategy complete idea for gaining answer towards examination questions (or) for research test hypothesis.

The research design, adopted for this study was remained Descriptive survey design.

VARIABLES:

- **Research variables:** perception regarding healthy living strategies
- **Baseline variables:** Age, Gender, Qualification, marital status, type of family, history of co- morbid condition, health check up done in past, physical activity, personal habits, source of information.

SETTING:

The term setting refers to specific place where data collection occurs.

This investigation was conducted at R.L. Jalappa Hospital & Research Centre in Tamaka, Kolar.

POPULATION: The term population means in which the target population represent the entire group or all the elements like individuals or objective that need certain criteria for inclusion of the study.

The population for this study was R.L. Jalappa Hospital & Research Centre, Tamaka, Kolar.

SAMPLE: Elderly people age group of 60-80 years

SAMPLE SIZE: The sample size consists of 100.

SAMPLING TECHNIQUE: Convenience sampling technique

SAMPLING CRITERIA:**➤ INCLUSION CRITERIA:**

- Included the elderly who were seeking health services.
- Belonging to elderly age group of 60-75 years.
- Able to speak and understand Kannada or English.

➤ EXCLUSION CRITERIA:

- who are having physical disability and terminally ill.
- Who are not willing to participate in the study.

DATA COLLECTION TOOL:

The adopted tool consisted of the following sections.

- **SECTION A:** Proforma on sociodemographic variables
- **SECTION B:** Assessment of perception regarding healthy living strategies among elderly by perception questionnaire.

METHOD OF DATA COLLECTION:

Written permission was obtained by concerned authorities and Participants.

The data was gathered in the following stages:

STEP 1: Ethical clearance was obtained from research and ethical committee of institution.

STEP 2: Written permission was obtained from the Medical super indent of hospital.

STEP 3: Data was gathered by the researcher based on inclusion and exclusion criteria.

STEP 4: Formal permission from Participants was obtained prior to the data collection.

STEP 5: Perception regarding healthy living strategies was obtained by perception questionnaire i.e., five-point Likert scale.

SCHEMATIC REPRESENTATION OF RESEARCH METHODOLOGY

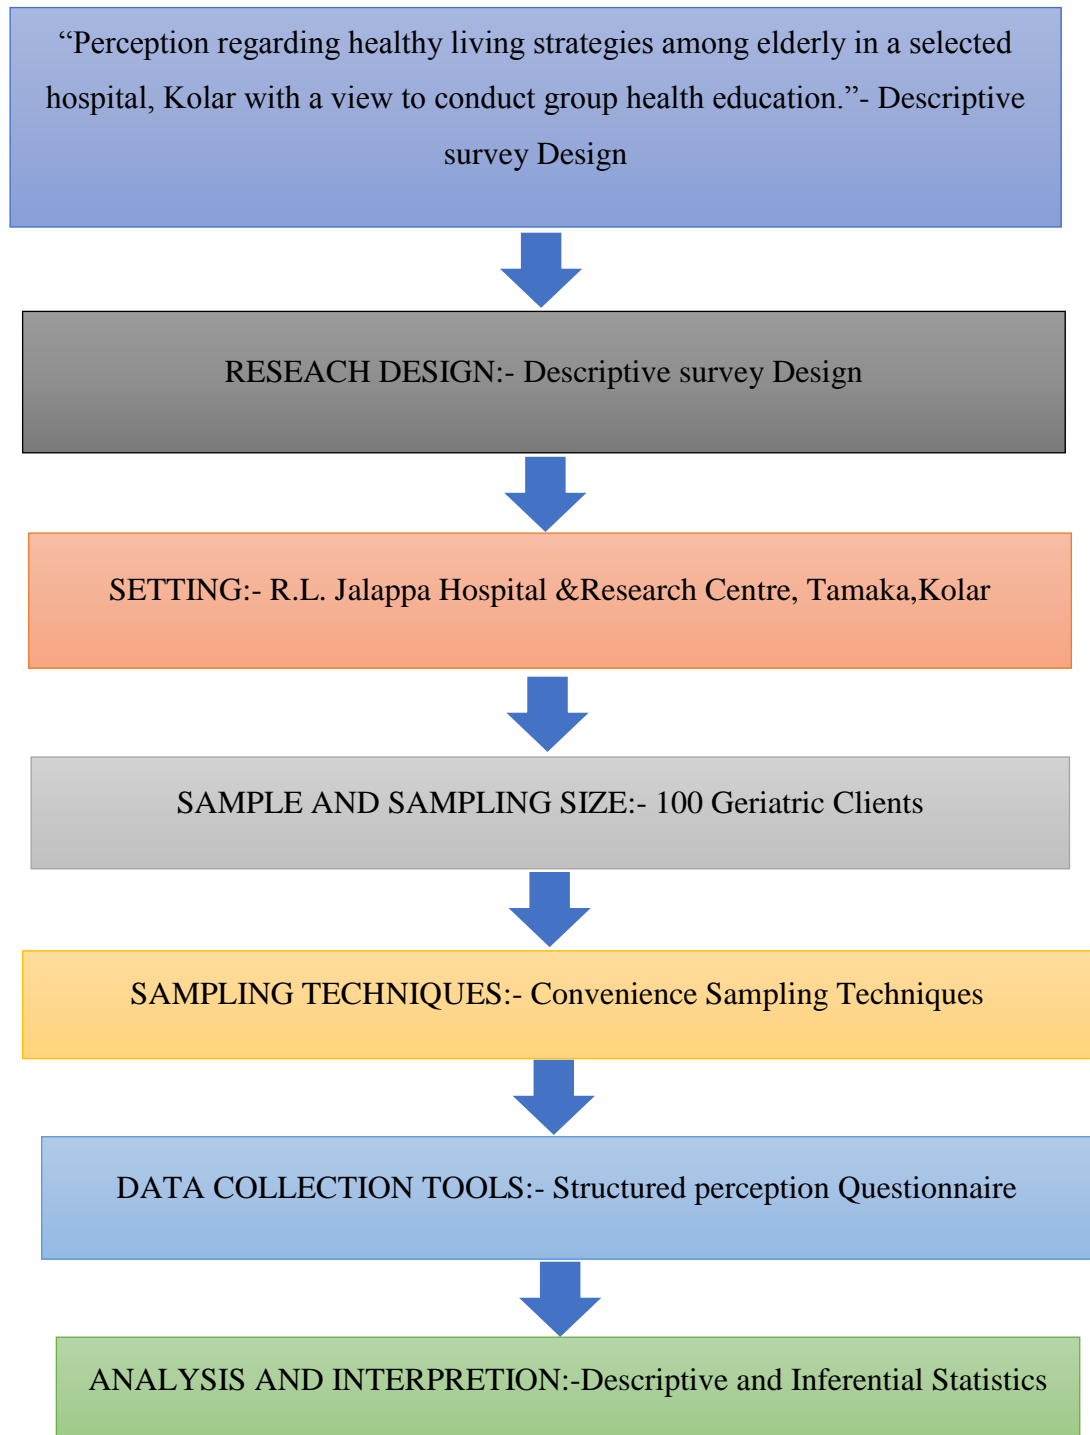

Fig. 1 SCHEMATIC REPRESENTATION OF RESEARCH METHODOLOGY

PLAN FOR DATA ANALYSIS:

The data gained was analyzed by Using descriptive and inferential statistics in completing the objectives of the study.

ETHICAL CLEARANCE:

Ethical clearance was granted from the institution ethical committee, Sri Devaraj Urs College of Nursing and to conduct the study permission got from medical superintendent, RL Jalappa Hospital and RC. Information was taken from study participants before collecting the data.

SUMMARY:

This chapter of methodology has dealt on research approach, research design, settings, population, sample size and sampling technique, description of the tool, data collection, plan for data analysis and ethical aspects with regard to organizing research.

CHAPTER - V

DATA ANALYSIS AND INTERPRETATION

“If you don’t know how to ask the right question, you discover nothing”

- W. Edward Deming.

“Research is what I am doing when I don’t know what I am doing”

- David Ogily

This part deals with the data enquiry and interpretation of the study findings. Data analysis is process of inspecting, cleaning, transforming, and modeling data with the goal of discovering useful information, suggesting conclusion and supporting decision making.

Based on the aims of the study of findings are organized as Follows:

- **SECTION A:** Proforma on socio demographic variables
- **SECTION B:** Assessment of perception regarding healthy living strategies among elderly by perception questionnaire.

TABLE -1: Frequency and distribution of Sociodemographic variables of the study

n=100

Sl. No.	Demographic characteristics	Frequency	Percentage (%)

1. Age

Majority 59% of participants were between the age group of 66-70 years, 18% of participants were between the age group of 71-75 years, 16% participants were between the age group of 60-65 years, and 7% participants were between the age group of 76-80 years.

2. Gender

Most of the participant that is 51% were males and 49% were females.

3. Qualification

Out of 100 participants, 2% were postgraduate, 6% were graduate, 21% were PUC\ diploma, 21% were high school, 21% were primary, 29 % were no formal education.

4. Marital Status

About 46% participants are married, 13% participants are unmarried, 8% are participants divorce, 33% participants are widowed.

5. Type of Family

Most of the participants, that is 55% are from nuclear family, 30% are from joint family, 10% are from extended family and 5% are any other specify.

6. History of Co-Morbid Condition

About 78% participants are having co-morbid condition and 22% participants are not having co-morbid condition.

7. Health Check Up Done in Past

Out of 100% participants 17% are going 6 months once in a year for health check up, 27% are going once in a year for health check-up, and 28% are going once in 2 years for health check-up and 28% are going once in 5 years for health check-up.

8. Physical Activity

Majority of 80% participants do physical activity and 20% participants will not do physical activity.

9. Personal Habits

About 69% participants have bad habits and 31% participants have no bad habits

10. Source of Information

At about 2% of observers, get information from health professionals, 85% of information gets from Family /Friends/ Neighbours, 11% of information gets from Mass Media, 2% of information gets from other source.

TABLE -2 =Distribution of samples according to overall level of perception.

Perception	Frequency (f)	Percentage (%)
Good	72	72%
Moderate	26	26%
Poor	2	2%
Total	100	100%

FIG 12: Overall level of perception of study participants

This section deals by the data investigation and explanation of the study findings. As per the objective of the study, regarding the information of healthy living strategies among elderly were considered and the result revealed that, **72%** of the

study participants have good perception, **26%** of the study participants have moderate perception and **2%** of the study participants have poor perception.

The association between socio demographic variables and perception related to healthy living strategies were assessed and the findings found a substantial relationship between the marital status and health check-up done in past regarding healthy living strategies and there is no statistically significant link between age, gender, qualification, type of family, history of co- morbid condition, physical activity, personal habits, sources of information.

Table 3. Association between Demographic variables with perception regarding healthy living strategies.

NOTE: $P < 0.05$, *SS-Statistically significant, NS-Non significant, Table value Df- 1(3.84), Df – 3(7.82), Df – 5(11.07).

Age: At the 5% level of significance, the calculated χ^2 value (7.6142) is smaller than the table value (7.82). As a result, there is no significant relationship between participants' ages and their opinion of healthy living practises.

Gender: The obtained χ^2 value (0.3704) which is less than the table value (3.84) at 5% level of significant. As a result, there is no significant relationship between participant qualification and perception of healthy living practices.

Qualification: The obtained χ^2 value (6.188) which is less than the table value (11.07) at 5% level of significant. As a result, there is no significant relationship between participant qualification and perception of healthy living practices.

Marital status: The obtained χ^2 value (8.5996) which is more than the table value (7.82) at 5% level of significant. As a result, there is a substantial relationship between participants marital status and their opinion of healthy living practices.

Type of family: The obtained χ^2 value (1.2688) which is less than the table value (7.82) at 5% level of significant. As a result, there is no significant relationship between the type of family of participants and their assessment of healthy living practices.

History of co-morbid: The obtained χ^2 value (0.4841) which is less than the table value (3.84) at 5% level of significant. As a result, there is no significant relationship

between participants' co-morbid history and their perception of healthy living techniques.

Health checkup done in past: The obtained χ^2 value (9.2597) which is more than the table value (7.82) at 5% level of significance. As a result, there is a substantial relationship between participants' previous health checkups and their impression of healthy living strategies.

Physical activity: The obtained χ^2 value (0.0901) which is less than the table value (3.84) at 5% level of significance. As a result, there is no significant relationship between participants' physical activity and their opinion of healthy living practices.

Personal habits: The obtained χ^2 value (0.662) which is less than the table value (3.84) at 5% level of significance. As a result, there is no significant relationship between participants' personal habits and their opinion of healthy living practices.

Source of information: The obtained χ^2 value (7.401) which is less than the table value (7.82) at 5% level of significance. As a result, there is no significant relationship between participants' information sources and their opinion of healthy living techniques.

CHAPTER – VI

CONCLUSION

Research is to see what everybody else has seen, and to think what nobody else has thought.

-(Albert Szent- Gyorgyi)

“Enough research will tend to support your conclusions.”

- Arthur Bloch

This chapter presents the summary, conclusions and its implication recommendation. A present education was directed to measure the perception on regarding healthy living strategies among, elderly in a selected hospital Kolar with a view to conduct group health education. A descriptive study design was approved to assess the perception concerning healthy living strategies among, elderly in a selected hospital Kolar

The study was showed at selected hospital, Kolar. The section size of study was 100 elderly of selected hospital Kolar. The study's section size was 100 seniors from a designated hospital in Kolar. The convenience sampling technique was used to choose the study sample. The facts were composed from samples by using a structured Perception Qestionnaire.

Created on the objectives of the study conclusion are presented under following points.

1. As per the first objective of the study, perception regarding healthy living strategies among elderly in a selected hospital, Kolar was separated into three parts category i.e., Good perception was 72%, Moderate perception was 26% and Bad perception 2%.
2. As per the second objective of the study findings, perception and designated demographic variables was done and result revealed that, there is a statistical significance association found for variables such as marital status ($\chi^2=8.5996, df=3, p=0.35116$) and Health checkup done in past ($\chi^2=9.2597, df=3, p=.02603$) and found no statistical significance difference for remaining variables as follows

Age($\chi^2=7.6142$,df=3,p=.054697),Gender($\chi^2=0.3704$,df=1,p=.542784),Qualification($\chi^2=6.188$,df=5,p=0.2883532) Type of the family ($\chi^2=1.2688$,df=3,p=.736552),History of Co-Morbid Condition ($\chi^2=0.4841$ df =1,p= .486557) Physical Activity ($\chi^2=0.0901$,df =1,p=.763994),Personal Habits($\chi^2=0.662$,df=1,p=.415853),Source of information ($\chi^2=7.401$, df=3, p=0.0601575).

NURSING IMPLICATIONS

- The consequences of the study can be used in the following areas of nursing profession.

NURSING PRACTICES

- Nursing professionals working in the hospital as well as in the community set up should educate the elderly about healthy living strategies.
- Nursing professional play a key role in enhancing the perception regarding healthy living strategies among elderly.

NURSING EDUCATION

1. Education is the base of knowledge. As a nurse educator they are abundant opportunities to educate the elderly about healthy living strategies.
2. The student nurses from college of nursing should be encouraged to conduct health education, role play etc.

NURSING ADMINISTRATION

- It strives to structure nursing work in a way that supports nurse's being present for patients and families.
- Providing information about ageing related problems and importance's of healthy living strategies.

NURSING RESEARCH

- 1) Nursing research is urgently needed to improve the health of nurses. If not only helps the nurses in improving their knowledge but also refine quality of care provided to society.
- 2) This study assists nurse researchers in carrying out investigations on the enhancement of health, perception, and knowledge of the elderly.

RECOMMENDATIONSS OF THE STUDY

1. A Similar Study can be replicated on a large sample in different types of setting.
2. A similar study can be conducted using teaching method.
3. A similar study can be conducted with control group.

LIMITATIONS

1. The sample size was limited up to 100.
2. The study limited to only considering the perception about healthy living strategies for elderly.

SUMMARY

1. This chapter deals with overall study analysis, implications, limitations, and recommendation to improve the perception of healthy living strategies.
2. Based on the findings revealed and proceeding the study the above recommendation was communicated to progress the perception regarding healthy living strategies in elderly.

CHAPTER VII

ANNEXURE-II

Letter Requesting permission to conduct research study

FROM,

Research students,
IIIrd year BSc (N)
Sri Devaraj Urs College of nursing,
Tamaka, Kolar – 563103.

TO,

The Medical Superintendent,
R.L. Jalappa Hospital & Research Center
Tamaka, Kolar – 563103.

Forwarded through:

The principal
Sri Devaraj Urs College of Nursing
Tamaka, Kolar – 563103

Respected madam,

Sub: Requesting permission to conduct research study in RL Jalappa Hospital & Research Center Tamaka, Kolar.

We, the undersigned IIIrd year BSc. (N) students of Sri Devaraj Urs College of Nursing Tamaka, Kolar has selected the below mentioned topic for our research project as a partial fulfilment for Bachelors of Nursing.

Title of the topic:

“A study to assess the perception regarding healthy living strategies among elderly in a selected hospital, Kolar with a view to conduct group health education.”

With regard to above, we request you to grant permission to collect data from geriatric patients of hospital. Further we assure you that we will collect the data from the patient without disturbing the hospital rules and regulations and the information collected from the patients will be kept confidential.

Hence, we request your good self to kindly consider for needful approval.

Thanking you,

Your sincerely,

Enclosures:

LETTER REQUESTING OPINION AND SUGGESTIONS OF EXPERTS FOR ESTABLISHING FOR CONTENT VALIDITY FOR RESEARCH TOOL.

From,

IIIrd year Bsc. and IInd year PB.bsc.Nursing students
Sri Devaraj Urs College Of Nursing
Tamaka Kolar- 563103

To,

Respected Madam/Sir

Subject: Request for expert opinion and suggestions to establish content validity of the research tool.

We Mr.Ajay Kumar, Ms.Alka Mathew, Ms Alphymol, Ms Anittamol Francis, Ms.Sreevidhya, Ms. Sujitha R Nair, Ms.Suhasini, Ms.Sumi.S, Ms.Sweety Varghese and Mrs.Lavanya the IIIrd year B.Sc and IInd year PB.Bsc nursing students of Sri Devaraj Urs College Of Nursing have selected the following research topic as a partial fulfillment for the requirement for award of Bachelors of Science in nursing.

Here with, we enclose,

Title: “A STUDY TO ASSESS THE PERCEPTION REGARDING HEALTHY LIVING STRATEGIES AMONG ELDERLY IN A SELECTED HOSPITAL, KOLAR WITH A VIEW TO CONDUCT GROUP HEALTH EDUCATION.”

1. Objectives of the study

- To assess the perception regarding healthy living strategies among elderly by using perception questionnaire.
- To find out the association between perception scores regarding healthy living strategies with selected demographic variables.

2. Tool

Part A: Socio-Demographic Performa

Part B: Perception questionnaire on Healthy living strategies

We humbly request you to go through the tool and give your valuable suggestions and opinion. Kindly suggest modifications, additions and deletions, if any, in the remark column.

Thanking you,

Yours sincerely,

Place:

Mr. AJAY KUMAR

LESSONPLAN

HEALTH EDUCATION

NAME OF THE TOPIC: Health promotion strategies among elderly.

NAME OF THE GUIDE: Mrs. Vani R (HOD Of Nursing Foundation Dept.)

VENUE: R L Jalappa Hospital Tamaka, Kolar.

METHOD OF AV AIDS: Charts, Flash cards.

GENERAL OBJECTIVES:

At the end of session, clients will be able to gain knowledge, improve the perception by understanding about health promotion strategies among elderly, and use this knowledge and improved perception in their daily to day activities of healthy living.

SPECIFIC OBJECTIVES:

The client will able to,

1. Introduce the health promotion strategies.
2. Define elderly

3. Enumerate the importance of health promotion strategies.

4. Enlist health promotion strategies among elderly

- Physical activities
- Diet style and healthy diet
- Socialization
- Fall prevention
- Stress and pain
- Medication and follow up
- Spiritual
- Health schemes

Sl. No.	Time	Specific objective	English content	Kannada content	Teachers Activity	Clients Activity	AV Aids	Evaluation
1.	3 min	Introduce the healthy promotion strategies	<p>Introduction</p> <p>A man's life is normally divided into five main stages namely infancy, childhood, adolescents, adulthood, and old age. In each of these stages an individual has to find himself in different situations and face different problems. The old age is not without problems.</p> <p>In old age physical strength deteriorates, mental stability diminishes; money power becomes bleak coupled with negligence from the younger generation.</p>	<p>ಪರಿಚಯ</p> <p>ಮನುಷ್ಯನ ಜೀವನವನ್ನು ಸಾಮಾನ್ಯವಾಗಿ ಶೈಶವಾವಸ್ಥೆ, ಬಾಲ್ಯ, ಹದಿಹರೆಯದವರು, ಪ್ರೌಢಾವಸ್ಥೆ ಮತ್ತು ವೃದ್ಧಾಪ್ಯ ಎಂದು ಐದು ಮುಖ್ಯ ಹಂತಗಳಾಗಿ ವಿಂಗಡಿಸಲಾಗಿದೆ.</p> <p>ಈ ಪ್ರತಿಯೊಂದು ಹಂತಗಳಲ್ಲಿ ಒಬ್ಬ ವ್ಯಕ್ತಿಯು ವಿಭಿನ್ನ ಸಂದರ್ಭಗಳಲ್ಲಿ ತನ್ನನ್ನು ಕಂಡುಕೊಳ್ಳಬೇಕು ಮತ್ತು ವಿಭಿನ್ನ ಸಮಸ್ಯೆಗಳನ್ನು ಎದುರಿಸಬೇಕಾಗುತ್ತದೆ. ವೃದ್ಧಾಪ್ಯವು ಸಮಸ್ಯೆಗಳಿಲ್ಲದೆ ಇಲ್ಲ.</p> <p>ವಯಸ್ಸು ಆಗುತ್ತ ಆಗುತ್ತ ದೈಹಿಕ ಶಕ್ತಿ ಹದಗೆಡುತ್ತದೆ, ಮಾನಸಿಕ ಸ್ಥಿರತೆ ಕಡಿಮೆಯಾಗುತ್ತದೆ;</p> <p>ಯುವ ಪೀಳಿಗೆಯ ನಿರ್ಲಕ್ಷ್ಯದ ಜೊತೆಗೆ ಹಣದ ಶಕ್ತಿಯು ಮಂಕಾಗುತ್ತದೆ.</p>				

2.	3 min	Define elderly	Definition Elderly or old age consist of ages nearing or surpassing the average life span of human beings. In India above 60 years of age is considered as old age.	ವ್ಯಾಖ್ಯಾನ ವಯಸ್ಸಾದವರು ಅಥವಾ ವೃದ್ಧಾಪ್ಯವು ಮಾನವರ ಸರಾಸರಿ ಜೀವಿತಾವಧಿಯನ್ನು ಸಮೀಪಿಸುತ್ತಿರುವ ಅಥವಾ ಮೀರಿಸುವ ವಯಸ್ಸನ್ನು ಒಳಗೊಂಡಿರುತ್ತದೆ. ಭಾರತದಲ್ಲಿ 60 ವರ್ಷ ಮೇಲ್ಪಟ್ಟವರನ್ನು ವೃದ್ಧಾಪ್ಯ ಎಂದು ಪರಿಗಣಿಸಲಾಗುತ್ತದೆ.	Defined elderly	Listening	blackboard	What is elderly?
3.	4 min	Enlist the Importance of health promotion strategies among elderly	Importance of health promotion for elderly <ul style="list-style-type: none"> Increasing awareness of health issues Promoting healthier behaviours Creating supportive environments Developing preventing strategies Encouraging early detection and treatment 	ಹಿರಿಯರಿಗೆ ಆರೋಗ್ಯ ಪ್ರಚಾರದ ಪ್ರಾಮುಖ್ಯತೆ <ul style="list-style-type: none"> ಆರೋಗ್ಯ ಸಮಸ್ಯೆಗಳ ಅರಿವನ್ನು ಹೆಚ್ಚಿಸುವುದು ಆರೋಗ್ಯಕರ ನಡವಳಿಕೆಗಳನ್ನು ಉತ್ತೇಜಿಸುವುದು ಬೆಂಬಲ ವಾತಾವರಣವನ್ನು ಸೃಷ್ಟಿಸುವುದು ತಡೆಗಟ್ಟುವ ತಂತ್ರಗಳನ್ನು ಅಭಿವೃದ್ಧಿಪಡಿಸುವುದು 	Enlisted importance of health promotion strategies among elderly	Listening	chart	What are the importance of health promotion for elderly?

				<ul style="list-style-type: none"> ಆರಂಭಿಕ ಪತ್ತೆ ಮತ್ತು ಚಿಕಿತ್ಸೆಯನ್ನು ಪ್ರೋತ್ಸಾಹಿಸುವುದು
